

Best Practices / Guidelines for Communication with Bee Producers

Canola producers undertake to use agricultural chemicals in a responsible manner.

Use of agricultural chemicals:

- Only registered agricultural chemicals may be used on canola;
- Use registered chemicals strictly according to the prescription of the label;

Bees Producers must enter into a Memorandum of Understanding with a canola producer if they wish to establish their bee hives at a producer with clear contact details.

Communication with Bee Producers:

- The bee producer must be informed of the agricultural chemical spray program of the canola producer;
- The bee producer should be notified of planned spraying if hives are to be moved or closed during flowering (\pm 24 hours before spraying).
